

Jumpstart Amazon Web Services Cloud Migration for Global Industrial Manufacturing Company

“Candid has the skilled experts required to push us out of the gate faster and get everything up and running right away”

Successful enterprises understand they must replatform to public cloud to achieve business agility. One of the largest global industrial printing and marking solutions companies - with more than 345,000 units installed - was ready to make such a move, but needed a jumpstart to meet aggressive timelines.

The goal was to enable the company to better integrate with modern printing plant environments. Having a highly skilled in-house technology team, the manufacturer required external expertise on Amazon Web Services (AWS) platforms to develop its cloud architecture blueprint within the given timetable. The client specifically sought an AWS technology partner with proven experience in defining and implementing cloud native architectural solutions.

CANDID DELIVERS SLINGSHOT START

Although the customer has engaged with AWS Professional Services for migration planning workshops and assessments, they were not confident about which architecture was optimal for their solution. To jumpstart the migration, the client selected Candid as the technology consulting partner based on its AWS innovative

approaches to delivering architecture quickly and efficiently.

The project launched with an interactive workshop including a discovery exercise to review challenges and goals, and review of architecture recommendations. After the workshop, Candid provided the recommended roadmap, phasing of migration activities, overall program structure for implementation, and helped the client develop its customized Cloud Blueprint.

“With tight development deadlines and complex architectural requirements, our team wasn’t prepared to drive this initiative forward as quickly as needed,” said a principal software engineer for the client. “Candid has the skilled experts required to push us out of the gate faster and get everything up and running right away.”

In alignment with the manufacturer’s strategic vision, Candid is mentoring and sharing AWS migration knowledge with client engineers, allowing them to become proficient and more independent at a faster pace. This allows the client to get up to speed more quickly, meet tight deadlines, and provide more proactive equipment maintenance.
